The Funds are actively managed by DJE and, where a benchmark index is indicated, without reference to it. The presented charts and tables concerning performance are based on our own calculations according to the gross performance (BVI) method<sup>2</sup> and illustrate past development. Past performance is not indicative for future returns. The BVI method takes into account all costs incurred at the fund level (e.g. management fees), the net performance and the issue fee. Additional individual costs may be incurred at the customer level (e.g. custodian fees, commission and other charges). Model calculation (net): an investor wishes to purchase shares for Euro 1,000. With a maximum issue surcharge of 5.00%, he has to spend a one-off amount of Euro 50.00 when making the purchase. In addition, there may be custodian costs that reduce performance. The custodian costs are decided by your bank's price list and service charges.

### MONTHLY COMMENTARY

The stock markets maintained their momentum from the previous month in February and performed very favourably. The German share index DAX reached a record high and rose by 4.58%. The broad European index Stoxx Europe 600 was slightly weaker with a gain of 1.84%. The broad US S&P 500 index was significantly stronger, rising by 5.66% and topping 5,000 points for the first time. The biggest gain in February came from the Far East: Hong Kong's Hang Seng Index climbed by 6.97%. Overall, equities, as measured by the global MSCI World, rose by 4.60% - all index figures in euro terms. A key performance driver behind this was the continuing enthusiasm of the markets around the topic of artificial intelligence. The major US technology companies grouped under the "Magnificent Seven" presented strong figures and fuelled the share rally. This was complemented by very robust data from the US labour market, with an increase of over 350,000 new jobs and an unemployment rate that remained stable at 3.7%. And the US Purchasing Managers' Index for the manufacturing sector rose to 52.5 points in February (previous month: 50.7), well above the threshold value of 50, which indicates an expanding economy. Its counterpart for services had already jumped from 50.5 to 53.4 points in January, and economists are expecting a further increase in February. However, inflation in the USA was 3.1% in January (experts had expected a fall to 2.9%) and core inflation was 3.9% compared to the same month last year, proving to be more stubborn than hoped. In view of the positive economic data, a recession in the USA should no longer be an issue in this cycle. On the one hand, the US Federal Reserve wants to avoid a recession, but on the other hand it wants to bring inflation towards its target of 2.0%. If this trend continues, key interest rates are likely to be cut later - possibly not until June - and not as often as expected. If inflation does not fall to 2.0% permanently, the Fed is likely to stop cutting interest rates again. In the eurozone, the Purchasing Managers' Index for services rose from 48.4 to 50 points, leaving the recessionary zone. However, the index for the manufacturing sector fell unexpectedly from 46.6 to 46.1 points in February. The eurozone economy is therefore likely to continue to tread water in the first quarter of 2024. In line with this, the German ifo business climate index is also stagnating at a low level; expectations are pessimistic, particularly in the manufacturing sector, and the order situation is declining. The rate of inflation in the eurozone rose by just 2.6% in February compared to the same month last year - in January it was 2.8%. This means that inflation is moving in the direction desired by the European Central Bank. If the inflation rate continues to approach the 2% inflation target in the coming months, the ECB is likely to cut interest rates. This would be the first rate cut since March 2016, but it was noticeable on the bond markets that expectations of interest rate cuts were already premature at the start of the year. Yields on high-quality government and corporate bonds rose noticeably. At 2.41%, 10-year German government bonds yielded 25 basis points higher, while their US counterparts were 34 basis points higher at 4.25%. The price of a troy ounce of gold rose by 0.23% to USD 2,044.30.

Evaluation by MSCI ESG Research

MSCI ESG Rating (AAA-CCC)	AA
ESG Quality Score (0-10)	7.5
Environmental score (0-10)	6.5
Social score (0-10)	5.2
Governance score (0-10)	5.9
ESG Rating compared to Peer Group (100% = best value)	88.35%
Peer Group	Mixed Asset EUR Flex - Global (1528 Funds)
ESG Coverage	98.30%
Weighted Average Carbon Intensity (tCO <sub>2</sub> e / \$M sales)	91.95

AAA	22.94%	BB	3.15%
AA	35.92%	B	1.76%
A	28.13%	CCC	0.00%
BBB	6.40%	Not Rated	1.70%

ESG Rating	What it means	
AAA, AA	Leader	The companies that the fund invests in show strong and/or improving management of financially relevant environmental, social and governance issues. These companies may be more resilient to disruptions arising from ESG events.
A, BBB, BB	Average	The fund invests in companies that show average management of ESG issues, or in a mix of companies with both above-average and below-average ESG risk management.
B, CCC	Laggard	The fund is exposed to companies that do not demonstrate adequate management of the ESG risks that they face, or show worsening management of these issues. These companies may be more vulnerable to disruptions arising from ESG events.
Not Rated		Companies in the fund's portfolio that are not yet rated by MSCI, but these are rated as part of our own analysis.

RB LUXTOPIC - FLEX A

INVESTMENT APPROACH

The RB LuxTopic - Flex has a clearly structured investment process. It is based on the three building blocks:

- F undamental
- S ystematic
- R isikoadjusted
- F undamental - International top companies

RB LuxTopic - Flex invests in large international groups with strong brands and a corresponding market position. These companies are often market leaders. They operate globally and generate their earnings worldwide. Above all, they are characterized by strong balance sheets, high earning power, steady growth and attractive dividends.

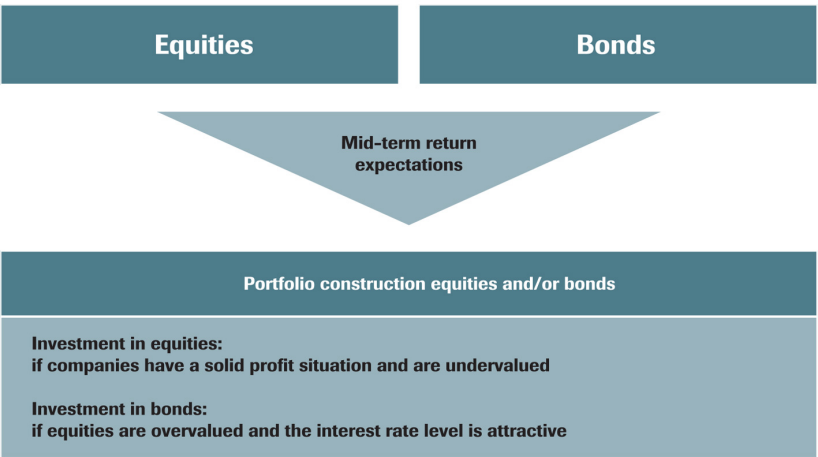

S ystematic - Systematic Stock Selection - Algorithm

A systematic selection process selects the strongest trending stocks from the given stock spectrum. The aim of this algorithm is to invest in higher-yielding companies over the long term and to underweight or weed out underperforming stocks.

R isikoadjusted - Active risk management

Active risk management complements portfolio management. If the setback in a falling stock market is smaller due to risk reduction, the investment starts from a higher level when the stock market later rises again.

INVESTMENT STRATEGY OF THE RB LUXTOPIC - FLEX

### Robert Beer Management GmbH

For more than 25 years, analysis models have been developed within the company. Dipl. Ing. Robert Beer and Dipl.-Inf. (FH) Peter Lukas lead the analysis and are supported by the whole team. The focus is on systematic and rule-based programs, emphasizing active title selection and consistent risk management. This allows an outperformance of standard indices to be achieved in the long term. Return and risk must be considered as an overall concept. Reconciling both is our recipe for success. This is backed up by intensive research work. The results are systematic and risk-adjusted investment solutions. This is how a specialized investment boutique was created.
