1st place, category Equity Funds Agriculture over 3 years

DJE - AGRAR & ERNÄHRUNG PA (EUR)**INVESTMENT STRATEGY**

The fund invests primarily in equities of international companies that are directly or indirectly involved in the agriculture or food value chain. The operations are independently of a benchmark and can reduce the investment level to as low as 51% in difficult periods. With the global population rising rapidly and the demand for food increasing as a result, the shares of agricultural and food companies are expected to perform well in the longer term, in spite of the sometimes significant price fluctuations of agricultural commodities. For ethical reasons does neither buy any physical commodities nor any derivatives who gain of its price increase.

The presented charts and tables concerning performance are based on our own calculations according to the gross performance (BVI) method² and illustrate past development. Future results may vary both positively and negatively. The BVI method takes into account all costs incurred at the fund level (e.g. management fees), the net performance and the issue fee. Additional individual costs may be incurred at the customer level (e.g. custodian fees, commission and other charges). Model calculation (net): an investor wishes to purchase shares for Euro 1,000. With a maximum issue surcharge of 5.00%, he has to spend a one-off amount of Euro 50.00 when making the purchase. In addition, there may be custodian costs that reduce performance. The custodian costs are decided by your bank's price list and service charges. Information regarding past development is not a reliable indicator of future performance.

MONTHLY COMMENTARY

African swine fever continues to spread in parts of Asia. While it is estimated that 50% of the pig breeding herds in China have already had to be emergency slaughtered, production losses of up to 20% are now also expected in Vietnam. Additional cases of disease have been reported from South Korea, the Philippines, Cambodia, Laos and Myanmar. As a result, import demand for pork in Asia continues to rise. But other protein alternatives such as fish, poultry and beef are also increasingly in demand. For the latter, this is already reflected in higher market prices. Accordingly, the shares of numerous protein producers from South America reached new highs for the year in September. However, from an ESG (environmental, social and governance aspects) sustainability perspective, the fund's exposure is concentrated on a few selected companies. At the same time, the relatively low prices of agricultural commodities support the earnings situation here anyway. Even soybean flour is increasingly being used in animal feed thanks to the low prices, so that global demand for soy in the wake of African swine fever is likely to fall less sharply than some market participants have assumed. In addition, the late harvest in the US continues to harbor certain harvest risks that could ultimately benefit South American farmers. However, the US government is also trying to improve the mood among US farmers with the help of an ethanol initiative. In addition, Chinese demand for US agricultural goods, which was limited by punitive tariffs, led to a price recovery in grain prices at the end of September.

Target group**The fund is suitable for investors**

- + with a medium- to long-term investment horizon
- + who wish to take advantage of global investment opportunities in this sector
- + who seek a promising but more speculative mix of investments

The fund is not suitable for investors

- with a short-term investment horizon
- who seek safe returns
- who are not prepared to accept increased volatility

DJE - AGRAR & ERNÄHRUNG PA (EUR)**INVESTMENT APPROACH**

In addition to steady population growth, the increasing demand for protein-rich foods resulting from rising living standards in developing countries is among the main drivers of agricultural prices. Moreover increasing urbanisation is likely to cause a shortage of farmland and thus make it difficult to close the supply gap in the agricultural sector (see chart below). According to the Food and Agriculture Organization of the United Nations (FAO), droughts and floods could reduce worldwide crop yields by another 20 to 40% in future. In order to at least alleviate this looming food shortage, the demand for modern farm machinery and irrigation equipment, efficient seeds, pesticides and fertilizers, aquaculture and suitable animal feed is likely to increase significantly. In this environment, DJE - Agrar & Ernährung invests in shares of selected companies that benefit from the above mentioned trends. But also in the case of falling commodity prices the fund is able to take advantage by specific investments in the food industry. In order to reduce risk the fund seeks to diversify the portfolio both thematically and regionally.

NUMBER OF PEOPLE WHO ARE FED FROM A HECTARE OF ARABLE LAND

Data: Chr. Hansen Holding A/S

As at: 01/09/2013

OPPORTUNITIES AND RISKS**Opportunities**

- + Attractive growth prospects in the agriculture and food sector
- + Active portfolio management constantly monitors the industry
- + Risk spreading via the professional selection of securities

Risks

- Equity prices may exhibit relatively strong fluctuations depending on market conditions
- Increased risk of price fluctuations resulting from focus on specific sectors
- Price risks for bonds, particularly when interest rates on the capital markets rise
- Issuer country and credit risks
